When London Is Finished

Mask Pulling Down and Building Up
In World Metropolis

There is good excuse for visitors to the English capital if they repeat in fuller measure than ever, the well-known smiling remark, "London will be a nice place when it's finished." Never before, since the days of the Londinium of the Roman occupation of Britain, has there been such a pulling down and building up of London as now. In a country with 26,000,000 unemployed, the brave housekeeper tight-rope walking, as it were, with his pickaxe across lofty fragments of

[illegible]

buildings of extra height are erected or projected, but they would be dwarfed by the colossal cliffs known in America as skyscrapers. There are two reasons. One is that London is much farther north than New York, and the sun is much less likely to need to catch London at a disadvantage by shining from a more slanting angle. Another reason is that as London has plenty of room to spread out, there is not much need for her to spread upward. Further, it is said that the city soil is not so stable as the soil in New York, and that London is building a little wider rather than a little higher. Little wider, but the streets are a little wider and straighter. Is the building better? There

happy signs that she is — among them a speeding up of slum clearance and increased purchasing power.

"Some barge" exclaimed American soldiers when, on arrival during the war, they burst into the Strand at the top of a bus. "Some barge" London is still. More it has long been so. It is barge. May be breakers at builders continue to equip her to stand out worthily as the Moth City of a great Commonwealth. Nations, meet for the new needs of swiftly moving world!

The golden age for escapism

auties is from 15 to 25, when all 6
factors seem to be near par. Counting
in, Professor Ford, a 1964 winner of
the second best age is 25-44, with
4.6 times as many persons are killed
Third rank the babies up to 14
with 10.7 times as many dying
Fourth the school children of 5 to
11 with 11.2.

Then come the 45 to 64-year-olds
with 3.5 deaths. Lastly there is
terrible pain to the most fearful
all persons the death rates, all
60 up, where rate is 87.2.

Problem May Be Solved

Bridge engineers are interested
in a new ark, reported to be solved
and successfully applied to a
Fourth the school children of 5 to
Westchester county park commu-
nity, N.Y. German engineers have
been wrestling for more than
years with the problem of the "ak
ark" bridge.

Perhaps the world may one day

are living, but you will die of starvation if you sit down and wait for it to come.
